# **Weekly Internship Report**

| Intern's Name: Ankita Laxman Kolapte                       |
|--|
| Internship Week: 1   |
| Company/Organization Name: Digisuraksha Parhari Foundation |
| Mentor's Name:   |

### Week Overview:

• Week Overview: During the first week of my internship, I focused on understanding the fundamentals of cybersecurity and setting up the working environment. I created a GitHub repository with a proper tree structure, researched and studied various cybersecurity tools, and developed Proof of Concept (PoC) demonstrations. I performed basic malware analysis, built a threat intelligence PoC, and implemented a homography detection tool. These activities helped me understand the practical applications of theoretical cybersecurity concepts.

### • Learning Outcomes:

- o Learned GitHub basics and created a structured repository for project uploads.
- o Improved knowledge of Linux commands and terminal operations.
- o Understood the process of malware analysis and its importance in cybersecurity.
- o Learned about threat intelligence, data collection, and correlation for detecting potential threats.
- o Studied homograph attacks and created a detection tool as a PoC.
- o Gained insight into security frameworks and their role in real-world scenarios.

### • Challenges Faced:

- o Initial difficulty in setting up GitHub and structuring the repository.
- o Understanding malware behavior required extra study and research of shared learning materials.
- o Needed time to familiarize myself with homography concepts and apply them in a working tool.
- o These challenges were overcome by consistent practice, online research, and guidance from mentors.

### • Goals for Next Week:

- o Learn more advanced Linux commands, piping, and filtering techniques.
- o Explore OSINT directories and tools for information gathering.
- o Work on the Lab Project with teammates and start building the homography link generator tool.
- o Strengthen understanding of Burp Suite, Wireshark, and other penetration testing tools.
- Mentor Feedback and Suggestions: My mentor appreciated the timely completion of the PoC tasks and encouraged me to continue practicing Linux commands regularly. They suggested that I focus on improving my research skills and explore more cybersecurity frameworks to deepen my understanding.

|        | confident in using cybersecurity tools. I am excited to apply this knowledge in upcoming weeks and work on more advanced projects. |
|--------|--|
| •      | Employer's Feedback: (Weightage assigned by the employer based on performance and contributions during the week.)                  |
|        |  |
| Intern | 's Signature:  |
| Date:  |  |
| Mento  | r's Signature:   |
| Date:  |  |
| Emplo  | yer's Signature:   |
| Date:  |  |
|        |  |
|        |  |

**Additional Notes:** This week helped me build a strong foundation for the rest of the internship. I got hands-on experience with GitHub, Linux, and cybersecurity concepts such as malware analysis and threat intelligence. The assignments were challenging but very informative, and I feel more

Intern's Name: Ankita Laxman Kolapte
Internship Week: 2
Company/Organization Name: Digisuraksha Parhari Foundation
Mentor's Name:

#### **Week Overview:**

• Week Overview: During Week 2, I worked on collaborative and technical tasks that involved group-based learning and project execution. I participated in the Lab Project with my teammates and worked on developing the Homography Link Generator Tool, which generates links that visually resemble legitimate websites (e.g., YouTube.com). Additionally, I deepened my understanding of Linux commands, OSINT tools, and explored practical penetration testing tools such as Burp Suite and Wireshark.

### • Learning Outcomes:

- o Strengthened Linux skills including piping, grep, and advanced commands.
- Learned about OSINT (Open Source Intelligence) directories and how to use them for gathering data.
- o Practiced using Burp Suite for web application security testing and Wireshark for network packet analysis.
- o Understood how Homography-based phishing attacks work and developed a generator tool to create look-alike URLs.
- o Gained knowledge of car security vulnerabilities, CVEs, ECU communication, and OBD port exploitation concepts.
- o Learned about using tools like Flipper Zero for wireless testing and interception demonstrations.

### • Challenges Faced:

- o Initially faced difficulty in generating accurate homograph links that bypassed basic detection filters.
- o Burp Suite configurations were tricky to set up for capturing all HTTP/HTTPS traffic.
- Required additional research to understand automotive security concepts (car key interception, CVEs).
- These challenges were addressed through group discussions, online research, and mentor guidance.

## • Goals for Next Week:

- o Set up and configure a Network Intrusion Detection System (IDS).
- o Learn how to analyze network traffic logs effectively.
- Explore bug hunting techniques and start learning about phishing toolkits like ZPhisher and CamPhish.
- Mentor Feedback and Suggestions: The mentor appreciated our teamwork on the Lab Project and highlighted the importance of documenting PoC steps clearly for future reference. They encouraged me to continue experimenting with Burp Suite and Wireshark to strengthen my web and network security analysis skills.

|        | me a deeper understanding of phishing attack vectors. The team collaboration during the Lab Project helped improve my communication and coordination skills. |  |  |  |  |  |
|--------|--|--|--|--|--|--|

| Date:  |  |  |  |  |  |  |
|        |  |  |  |  |  |  |
|        |  |  |  |  |  |  |

**Additional Notes:** Week 2 provided more hands-on exposure to penetration testing and OSINT techniques. Working on the Homography Link Generator Tool was particularly interesting and gave

Intern's Name: Ankita Laxman Kolapte
Internship Week: 3
Company/Organization Name: Digisuraksha Parhari Foundation
Mentor's Name:

#### **Week Overview:**

Week Overview: In Week 3, my primary focus was on network security. I worked on setting
up and configuring a Network Intrusion Detection System (IDS) to monitor suspicious
network traffic and generate alerts. Along with that, I researched bug hunting
methodologies and explored common penetration testing approaches. I also practiced
phishing simulations using tools like ZPhisher and CamPhish to understand social
engineering risks.

### • Learning Outcomes:

- o Learned how to configure and test a Network IDS for detecting malicious activities.
- o Understood packet capture analysis and how IDS rules trigger alerts.
- o Researched bug bounty platforms and methodologies for finding vulnerabilities.
- o Explored phishing toolkits (ZPhisher, CamPhish) to learn about credential harvesting attacks.
- o Studied OWASP API Security Top 10 and its role in securing APIs.
- Explored resources such as ransomware.live for threat updates and APISec University for API security learning.

### • Challenges Faced:

- o IDS configuration required multiple iterations to properly detect test attacks.
- o Understanding phishing kit payloads and their working took extra time and mentor assistance.
- Needed to spend time reading OWASP API documentation to fully grasp API attack vectors.
- These issues were resolved by reading documentation, using community tutorials, and consulting with peers/mentors.

### • Goals for Next Week:

- Work on Network IPS configuration and testing. Build and test a Steganographic File Integrity Checker to detect hidden data manipulation.
- o Learn basics of Python scripting for automating security tasks.
- Mentor Feedback and Suggestions: The mentor encouraged me to experiment with more IDS rules and signatures to gain confidence in tuning detection systems. They also recommended participating in small Capture The Flag (CTF) challenges to strengthen practical problem-solving skills.
